

Max7219 Library Matrix Display

Library: MaxLib

The library provides a way to make a led equal to a pixel. This library makes it possible to connect 4 matrices with eachother.

Chip: Max7219

The Max7219 is the chip that is used in this project, this chip can be used for matrices.

Applicatie: Move!

As application I created a new game. You move by tilting a tilt sensor (left or right) and a button (forward). The goal of the game is to score points by touching the target, but be beware! If you touch the walls or even an obstacle, you can start all over again!
